

Problem-Solving KATA “Lean Manufacturing Techniques” Workshop

Kata can improve your current way of thinking about a problem. It makes dealing with uncertainty of a challenge easier by giving team members a structured routine for navigating a challenge and finding a solution, at the same time working on developing a new habit.

Kata is a four-step routine for working toward a goal in a systematic way. Kata is a problem-solving methodology of creating incremental, continuous improvement by repeating a four-step routine that teaches and facilitates a logical approach to problem-solving.
