How glass was made!

Glass was made from a natural and abundant raw materials(sand, soda ash, and limestone) that are melted at very high temperature to form a new material/glass.

- 1.Melting and Refining. To make clear glass, need the right ser of raw materials is required.
- 2.Float bath. The molten material from the furnace flows into the float bath, consisting of a mirror-like surface made from molten tin..
- 3.Coating for reflective glass
4. Cutting the glass in pieces.

How we can recycle glass!

How we can recycle glass is by putting them in bins and picking up glass from other places and by helping the environment and glass can be remade to sand for playgrounds and etc. Recycling glass can be used for many things like sand or windows. Sand can be put in playgrounds, parks etc.
